### **Examiner's Statement of Reasons for Allowance**

1. This Office Action is in response to the *Appeal Brief* filed on February 2, 2000 for the above-identified patent application. After further reviewing the claimed subject matter and the applicant's arguments, the rejection to the claims is withdrawn, and as a result all the pending claims are allowed.
2. The following is an examiner's statement of reasons for allowance: The examiner has carefully considered the claims 1 through 38. The present invention relates to a system and method for presenting a user status indicator for network users on the system and establishes communications with network users through the user status indicator.

The prior art of record, Mirabilis' ICQ, Quick Tour, is a communication software that enables user to send files, messages, URLs, or chat with other ICQ users. User can communicate with anyone on the Net without having to make any prior arrangements. ICQ searches the Net for the user and alerts the user when the user is online. While the user work with other applications, ICQ alerts you when friends and associates log in, allowing you to work efficiently while maintaining a wide range of Internet functions at your fingertips. Among the functions available are: chat, message, e-mail, and URL and file transfer.

Independent claim 1 recites in part "A system for enabling network users to establish at least one communication with one or more target network users, the one or more target network users being associated with a user indicator that is presented within two or more types of electronic documents, the system comprising: user indicator

presentation means for presenting one or more user indicators within the two or more types of electronic documents, wherein the electronic document types are capable of being generated using two or more types of applications and wherein each user indicator is associated with one or more target network users”

ICQ discloses some of the claimed limitations of claim 1 including “communication selection means” (e.g., see page 6) and “*communication means*” (e.g., see page 6). ICQ also discloses “*user indicator presentation means*”, such as a name (nickname) of the user/contact person with his/his status (online, offline, etc) shown in the display. ICQ further describes that the user has full control over the way his availability is presented to other users. Individual users select their availability status (see Quick Tour, page 4). However, ICQ fails to further describe the functionality of the “*user indicator presentation means*” is “*for presenting one or more user indicators within the two or more types of electronic documents, wherein the electronic document types are capable of being generated using two or more types of applications and wherein each user indicator is associated with one or more target network users.*” as recited in claim 1. Thus, prior art neither renders obvious nor anticipates the combination of claimed elements in light of the specification. Thus, claim 1 is allowed.

Independent claims 8, 15, 22, 30-33 and 38 each recite features similar to those described above in claim 1. These claims are also allowed for at least the reasons provided above. Claims 2-7, 9-14, 16-21, 23-29, and 34-37 depend from the above independent claims. Thus, these claims are also allowed at least by virtue of their dependency from the allowed claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
